PREFACE

The year 2008 has been designated as International Year of Sanitation by the United Nations. The most important aspect relating to sanitation is the access of people to modern toilet, i.e., water closet latrine. A water closet latrine goes a long way not only in keeping one's house in hygienic condition but also helps in keeping a city's environment clean. Open defecation, pit latrines and dry latrines create unhygienic conditions resulting in spread of various diseases.

It is estimated that more than 2.5 billion people worldwide have no access to proper sanitation. Open defecation is still a common sight in many developing countries of the world. What is the scenario relating to availability of modern toilet facilities in India? How many households in the cities and towns have access to modern toilets? The present document has been brought out to answer these questions. The Census of India, 2001 provides data pertaining to distribution of households by type of latrine within the premises. The various types of latrines covered in the Census are water closet, pit and others. The data does not include institutional households. The instant document presents the data relating to availability of toilet facilities within the premises of households, as given by the Census of India 2001, for each of the cities and towns of India and also carries brief analysis of data.

The document has been prepared under the overall supervision and guidance of Shri J. Nagarajan, Senior Social Scientist. He also undertook the task of final editing of the report in which Shri P.P. Tuteja assisted him. Shri K.L. Buttan, Research Officer and Shri C.A. Lokesh prepared the draft of the report and scrutinized the same. Shri Lokesh, along with Shri T. Tete, also carried out computerization and processing of data to generate the analytical tables required for drafting the report. Shri B.K. Bharti, Senior Research Officer supervised the work relating to computerization and scrutiny of data. Secretarial assistance was rendered by Smt. Amarjeet Kaur.

Administrators, policy-makers, urban planners, researchers and academicians will find the document informative and useful.

CHAPTER I

Households Having Water Closet Toilet Within The Premises

The number of households having water closet toilet within the premises in cities and towns of the country, as per the Census of India – 2001, may be seen in the Annexure. The important findings pertaining to the number of households having water closet toilet within the premises are given below:

- I. **Percentage range of households having water closet toilet within the premises : 0 – 100 %**
- II. **Cities / towns where all the households are having water closet toilet within the premises (100%) :**

City / Town	State

CHAPTER V

Concepts and Definitions

1. Urban Areas

In the Census of India 2001, the definition of urban area adopted was as follows:

- a. All places with a municipality, corporation, cantonment board or notified town area committee, etc.
- b. A place satisfying the following three criteria simultaneously:
 - i. a minimum population of 5,000;
 - ii. at least 75 per cent of male working population engaged in non-agricultural pursuits; and
 - iii. a density of population of at least 400 per sq. km. (1,000 per sq. mile).

For identification of places which would qualify to be classified as 'urban' all villages, which, as per the 1991 Census had a population of 4,000 and above, a population density of 400 persons per sq. km. and having at least 75 per cent of male working population engaged in non-agricultural activity were considered.

2. Household

A 'household' is usually a group of persons who normally live together and take their meals from a common kitchen unless the exigencies of work prevent any of them from doing so. Persons in a household may be related or unrelated or a mix of both. However, if a group of unrelated persons live in a census house but do not take their meals from the common kitchen, then they are not constituent of a common household. Each such person was to be treated as a separate household. The important link in finding out whether it was a household

or not was a common kitchen. There may be one member households, two member households or multi-member households.

3. Institutional Household

A group of unrelated persons who live in an institution and take their meals from a common kitchen is called an Institutional Household. Examples of Institutional Households are boarding houses, messes, hostels, hotels, rescue homes, jails, ashrams, orphanages, etc. This category of households covers only those households where a group of unrelated persons live in an institution and share a common kitchen.

4. Type of Latrine within the house

- i. **Pit Latrine** : The latrines attached to the pit that is dug into the ground for the reception of night soil are reckoned as pit latrines.
- ii. **Water Closet Latrine** : The sanitary water flush latrines are those latrines that have water closets fitted with flushing cistern. Such latrines may be connected to a septic tank or an underground sewerage system. The faecal matter from these types of latrines is removed without the need for scavenging.
- iii. **Other Latrine** : This category includes service latrines; latrines serviced by animals such as pigs, etc. and all latrines other than the pit and the water closet types of latrine. Service latrines are dry type of latrines from where human excreta are removed by scavengers.
- iv. **No Latrine** : This category covers houses where no latrine of any kind is available to the household within the house. However, in the case of multi-household houses, if they are sharing a common latrine, latrine is considered as available to all the households occupying the house.
